

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

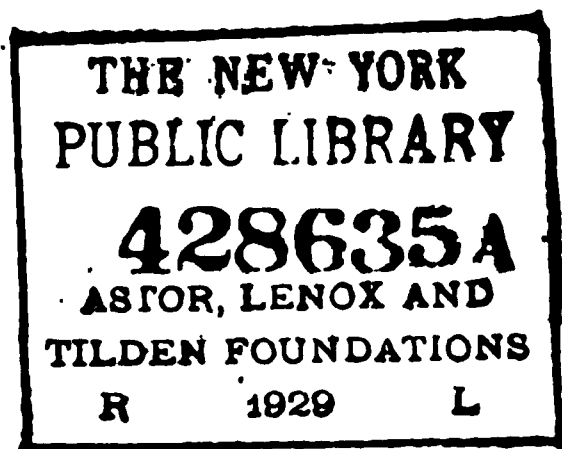

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT.

TO THE MOST HON.
THE MARQUESS OF LOTHIAN, K.T.,
Her Majesty's Secretary for Scotland.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,
EDINBURGH, 20th December 1889.

MY LORD,

I had the honour in 1888, in conformity with the requirements of the seventh section of the Scottish Registration Act, 17 and 18 Vict. cap. 80, to transmit to you as Her Majesty's Secretary for Scotland, General Abstracts of the Births, Deaths, and Marriages registered in Scotland during the year 1887, along with the usual explanation and commentary.

At the same time, my Twenty-third Annual Report on Vaccination was transmitted, in accordance with the nineteenth section of the Scottish Vaccination Act, 26 and 27 Vict. cap. 108.

I have now the honour to transmit the Detailed Annual Report, together with the relative Tables, regarding the Births, Deaths, and Marriages registered in Scotland during the same year (1887).

I have the honour to be,

MY LORD,

Your most obedient Servant,

STAIR AGNEW,

Registrar-General.

POPULATION.

The total population of Scotland, as estimated to the 30th June 1887, is 3,991,499, of which 1,934,215 are males, and 2,057,284 females.

TABLE II.—Population of Scotland, in its Five Groups of Districts, by the Censuses of 1871 and 1881, and estimated to the middle of 1887.

FIVE GROUPS OF DISTRICTS.	CENSUS 1871.			CENSUS 1881.			Estimated to 30th June 1887.		
	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.	Males.	Females.	Total Sexes.

SCOTLAND	1,603,143	1,756,875	3,360,018	1,799,475	1,936,088	3,735,563	1,934,215	2,057,284	3,991,499

TABLE III.—Births, Deaths, and Marriages in the Five Groups of Districts in Scotland, 1855-1887.

Principal Towns above 25000 inhabitants. Large Towns above 10000 and under 25000 inhabitants. The Small Towns from 3000 to 10000 inhabitants from 1855 to 1871—but from 1871 and upwards the Small Towns have from 2000 to 10000 of population.

The male births registered number 63842, the female 60576; the former thus outnumbering the latter by 3266. The births exceed the deaths during the year by 49872.

The number of illegitimate births reported is 10380, equal to 8·34 per cent. of the total births,—a somewhat higher ratio than for last year. The male illegitimates born are 5342, the female 5038.

TABLE Va.—Number of Births, Deaths, and Marriages in the Principal Towns of Scotland during 1887, and their Proportion to the Estimated Population; also the Illegitimate Births, and their Proportion to the Total Births.

OCCASIONAL TABLE Vb.—Showing the state of Illegitimacy in all Scotland, in the Five Groups of Registration Districts, in the Principal Towns, and in two Counties, 1887.

LOCALITIES.	Estimated Number of Unmarried Women and of Widows living between the ages of 15 and 45 at middle of 1887.	Number of Illegitimate Children born during 1887.	Percentage of Illegitimate Children to the Unmarried and Widowed Women aged 15-45.	Percentage of Illegitimate to Total Births.
Scotland	523,278	10,380	1·96	8·34
Principal Town Districts	219,134	8,987	1·82	7·8
Large Town Districts	54,596	1,094	1·99	6·9
Small Town Districts	106,094	2,112	1·99	8·1
Mainland-Rural Districts	124,898	3,050	2·44	10·6
Insular-Rural Districts	18,556	197	1·06	6·2
Glasgow	69,115	1,605	2·32	8·3
Edinburgh	43,371	643	1·48	8·6

Glasgow Landward and Suburban	31,341	295	0·94	4·3
County Banff	7,672	329	4·29	16·1
County Wigtown	5,326	208	3·91	18·2

The marriage-rate varies considerably, as may be presumed, in the five registration districts, in accordance with the density of the population of each, their surroundings and method of gaining a livelihood, &c., being highest in the Principal Town Districts, where it is in the ratio of 75 per ten thousand of the inhabitants of the same, the mean for the last ten years being nearly 84; in the Large Town Districts the ratio is 64 in like proportion, the mean here for the last ten years being 70; in the Small Town Districts the rate is 57 per ten thousand, that for the ten years being 62; in the Mainland-Rural Districts for the present year it is 49, and for the ten years almost 53; in the Insular-Rural Districts being but 34 for 1887, and nearly 42 as the mean of the aforesaid ten years. These ratios, when compared with those of last year, indicate a slight increase in the Large Town Districts, a decrease in the Insular-Rural Districts, being almost without change in the other three districts.

In six counties, as shown in Table VI., the marriage-rate is above that for the country as a whole, viz., in Linlithgow where it is 80·2 per ten thousand of the inhabitants, in Edinburgh it is 75·1, in Lanark 72·4, in Renfrew 64·4, in Ayr 63·9, and in Forfar 62·8. Those counties with the

TABLE XII.—Proportion of Marriages, 1855-1887. Percentage of Marriages contracted in Scotland according to the Rites of the several Religious Denominations during each of the Years 1855-1887.

German Empire, 77 in Italy, 73 in France, 71 in Belgium, and 70 in Denmark and the Netherlands.

TABLE XVIII.—Marriages, 1887. Percentage of Men and Women who signed by Writing or by Mark, of persons under 21 years of age, and of Marriages between persons in different conjugal conditions, in Scotland, its Groups of Districts, Divisions, and Counties; also the percentage of the same in Edinburgh and Glasgow.

Report.

Town Districts, in the former the death-rate among the males at this tender age being 16·549 per cent., among the females 13·867 per cent., and in the latter—the Large Town Districts—16·128 per cent. and 13·425 per cent. respectively. The death-rate below one year of age is lowest in the Insular-Rural Districts, being here in the case of the males 7·673 per cent., and of the females 5·961 per cent., and in each district the male death-rate is above that of the female at the same age.

Under two years of age the proportion of male and female deaths in Scotland did not vary much, being 5·756 per cent. in the case of the former and 5·701 per cent. in that of the latter, these proportions being exceeded in the case of both sexes in the Principal and Large Town Districts. In the Rural Districts the female mortality-rate overtops that of the male.

Of children under three years of age 2·508 per cent. of the males and 2·486 per cent. of the females died in Scotland during the year under review, exceeded in the case of both sexes in the Principal Town Districts, and in that of the males in the Large Town Districts, and in the Mainland and Insular-Rural Districts the female rate exceeded the male.

Under four years of age the rate for Scotland does not vary much in the case of either sex, being 1·521 per cent. in that of the males and 1·457 per cent. in that of the females, again exceeded in the case of both sexes in the Principal Town Districts, and in that of the females in the Large Town Districts, where, as also in the Insular-Rural Districts, the female death-rate is higher than that of the male.

Under five years of age the mortality-rate for the whole country as to sexes is again not very different, being in the case of the males 1·100 per cent. and in that of the females 1·112 per cent., exceeded in both cases in the Principal and Large Town Districts; in all the districts except those of the Small Towns the female death-rate is now above that of the male.

TABLE XXIII.—Ages of Males and Females who died in Scotland, and in each of its Groups of Districts, during the Year 1887.

Hooping-Cough caused 3212 deaths, equal to 81 per hundred thousand

males 1453, females 1759. The greatest mortality occurs in the Principal

████████████████████

thousand of their estimated population, and lowest in the Insular-Rural Districts, where it is 20.

Diphtheria caused 805 deaths, in the ratio of 20 per hundred thousand or 1·09 per cent. of the total deaths; males 372, females 433, being most marked in the Principal and Large Town Districts.

Continued Fevers are the cause of 1037 deaths, equivalent to a rate of 26 per hundred thousand of population, or 1·41 per cent. of all the specified deaths; the males number 518, the females 519, and in all the Districts, with the exception of those of the Principal Towns and Mainland-Rural, the rate is above that for Scotland as a whole, being highest in the Small Town Districts, where they caused a mortality-rate of 32 per hundred thousand of population, or 1·76 per cent. of all the deaths therein occurring. Typhus caused 126 deaths, or 3 in every hundred thousand of population. Enteric or Typhoid 835, equal to 21 per hundred thousand,

cent. of the whole, were registered as occurring during the first 5 years of life.

To Cancer 2373 deaths are ascribed, equal to 60 in every hundred thousand of the population as estimated, or 3·21 per cent. of the total deaths; males 876, females 1497. Disease of this nature was proportionately most fatal in the Mainland-Rural Districts, where the rate is 65 per hundred thousand. As to the incidence of the disease in the Principal Towns, Tables XXX. and XXXI. indicate how, in Kilmarnock, 53·0 in every thousand deaths were due to Cancer, in Edinburgh 47·7, in Perth 37·4, in Leith 34·8, in Aberdeen 33·8, in Greenock 28·6, in Dundee 25·7, in Glasgow 22·8, in Glasgow Landward and Suburban 22·6, and in Paisley 16·5.

Diseases of a Tubercular nature caused 10275 deaths, equivalent to a rate of 260 in every hundred thousand of the inhabitants of Scotland, or 13·92 per cent. of all the specified mortality; male deaths are 5046, female 5229. The heaviest mortality from such is in the Principal and Large Town Districts, in the former of which the rate is 309 per hundred thousand, or 14·76 per cent. of all deaths, and in the latter 284, or 14·18 per cent. In the Small Town Districts the rate to population is 255, in the Mainland-Rural Districts 188, and in the Insular-Rural Districts 185. Phthisis or Consumption causes the greatest mortality among diseases of this nature, 7418 deaths being so induced, of which 3511 are of the male, and 3907 of the female sex, together equal to a death-rate of 188 in every hundred thousand inhabitants, or 10·05 per cent. of all the specified deaths. The highest ratio from this occurred in the Principal Town Districts, where 10·54 per cent. of the total are so caused, next come the Insular-Rural

TABLE XXXII.—Number and Proportion of Deaths at different Ages from the Zymotic and Ordinary Diseases in Scotland in 1887.

cent. of the total specified deaths; males 4388, females 4245. The mortality from diseases of this nature is higher in the Urban than in the Rural Districts, and somewhat more so in the Large Town Districts than in the Principal and Small Town Districts. Of the various affections under this heading, Apoplexy caused 2157 deaths; males 985, females 1172, and Paralysis 1905 deaths; males 857, females 1048. In the towns, 14·32 per cent. of the total specified mortality in Paisley was due to diseases of a nervous character, 12·78 per cent. in Greenock, 12·72 per cent. in Glasgow Landward and Suburban, 12·21 per cent. in Aberdeen, 11·59 per cent. in Kilmarnock, 11·22 per cent. in Perth, 11·19 per cent. in Glasgow, 11·06 per cent. in Edinburgh, 10·15 per cent. in Dundee, and 9·82 per cent. in Leith.

Diseases of the Circulatory System, the Heart and Blood-Vessels, caused 6059 deaths, equal to 153 in every hundred thousand of population, or they formed 8·21 per cent. of the total deaths throughout the year; males 2944, females 3115. The greatest percentage of mortality from diseases of this nature occurred in the Mainland-Rural and Small Town Districts, where 9·75 and 8·92 respectively of the deaths therein registered are under this heading. In Kilmarnock, among the Principal Towns, 12·18 per cent. of the total deaths are due to Disease of the Organs of Circulation, Edinburgh coming next with 10·53 per cent., followed by Leith with 10·37 per cent., Perth with 9·01 per cent., Dundee with 7·52 per cent., Aberdeen with 7·46 per cent., Paisley with 7·03 per cent., Greenock with 6·52 per cent., Glasgow Landward and Suburban with 6·42 per cent., and Glasgow with 6·14 per cent.

From Diseases of the Respiratory Organs, other than those included

TABLE XXXV.—Vaccinations in Scotland, 1877-1887, and Proportion to the Births each Year.

Among the Principal Towns, Paisley stands first with 7·03 per cent. of all the deaths due to those affections, Kilmarhook follows with 6·68 per cent., Edinburgh and Aberdeen each with 6·64 per cent., Glasgow with 6·57 per cent., Glasgow Landward and Suburban with 6·50 per cent., Greenock with 6·39 per cent., Leith with 6·18 per cent., Perth with 5·78 per cent., and Dundee with 5·34 per cent. Enteritis caused 937 deaths, Peritonitis 796, Hernia 137, Ileus, Stricture of Intestine, and Intussusception 396, and Liver Diseases 939.

To Disease of the Urinary Organs 1730 deaths are credited, equal to 14 per hundred thousand of the population, or 2·34 per cent. of the total mortality; males 1059, females 671. Acute Nephritis caused 329 deaths, Bright's Disease 608, Calculus 37, Disease of Bladder and Prostate 830, and other Diseases of Urinary Organs 304.

Diseases of the Generative Organs caused 220 deaths; 15 males and 215 females, 69 being from Ovarian Disease, and 127 from Uterine Affections.

Diseases incidental to Parturition, not including Puerperal Fever, caused 338 deaths, the latter alone being the registered cause of 275.

To Disease of the Bones and Joints 459 deaths are ascribed; males 252, females 207, and to those of the Integumentary System 242.

From Developmental Diseases, not including Old Age, there are 2065 deaths; males 1143, females 922. Premature Birth caused 1670, Atelectasis 107, Cyanosis, Spina Bifida, and other Congenital Defects 288.

From Old Age 4523 were recorded; 1671 being men, and 2852 women, 36 of the former and 104 of the latter were between 95 and 100, and 5 men and 21 women were reported to be 100 years old or upwards at death. One man was 100 at death, one 101, two 103, and one 107; 9 women were 100 at death, six 101, three 102, two 103, and one 104; 17 of the 21 were widows.

To Violence in its various forms 2587 deaths are attributed; males 1887, females 700, equal to a rate of 65 per hundred thousand of population. Fractures and Contusions account for 836, males 632, females 204; Burns and Scalds for 270, males 142, females 128; Drowning for 576, males 505, females 71, of which 520 were accidental and 56 suicidal. 220 males and 130 females were accidentally suffocated, and 30 males and 20 females

themselves; 37 males and 19 females drowned themselves; 42 males and 16 females hanged themselves; and 13 males and 4 females ended their existence in manners not specially stated.

In the Principal Town Districts 63 males and 30 females committed Suicide; in the Large Town Districts 15 males and 11 females did the same; in the Small Town Districts 45 males and 8 females; in the Mainland Rural Districts 40 males and 13 females; and in the Insular-Rural Districts 2 males and 1 female did likewise.

Twenty-one cases of Homicide were registered during the year.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

The following remarks on the weather of 1887 are extracted from the Astronomer-Royal's Notes appended to the Monthly Reports issued by the Registrar-General.

January was on the mean of its whole extent not remarkable in an extreme degree for any given, or ordinarily recognised meteorological feature, though inclining in a second degree to rather higher mean temperature, less rainfall, more strength of wind, and that chiefly from the W.S.W. Yet the mean temperature was sufficiently low to have caused most of the so-called rainfall to have been in reality snowfall, and to have kept the face of the country white, in place of green, for a considerable number of days, and to have produced no little irritation to citizens on account of the supposed ill-considered rules of municipalities regarding the clearance of pavements and removal of the proceeds.

While amongst the *direct* characteristics of the weather of February it may be cited that the mean temperature was nearly 1° above the mean of all former Februarys; the daily range of temperature greater by rather more than 1°; the depth of rainfall smaller by one-third; the strength of wind less by a tenth; the N. and E. elements of its direction

TABLE XL.—Monthly Mortality and Mean Temperature in Scotland during 1887, compared with the Mean of the Ten Years 1871-1880.

Report.

has reached for more than 20 years past; but the most remarkable feature was the scantiness of the rainfall, joined to the previous dry state of the country.

While the barometric pressure for *July* was near the ordinary quantity, its monthly range was much greater, and with such disturbance, the rainfall was heavier than in any other month of the present year, except January. And yet as a rainfall for July, it was scanty, or almost $\frac{1}{2}$ of an inch less than the mean of all former months of July. At the same time the mean temperature was remarkably high, higher indeed than in any one recorded year, except that of 1868, while the prevailing dryness of the air was shown by a humidity return so small as 76.

August 1887 was a month of remarkable quietude, comfort, and pleasantness, with nothing much out of the way, or differing notably from the mean of former years for the same month; the small differences found being generally on the side of what is agreeable and healthy.

With the month of *September* the long drought of the spring and summer of 1887 decidedly closed. The barometric pressure was rather high, but much disturbed; mean temperature, rather low; humidity, abundant; a greater number of rainy days, and greater depth of rainfall than the average; not much wind, and its direction inclining more to E.N.E. than usual.

The weather of *October* was characterised by unusually high barometric pressure and low mean temperature, accompanied by less humidity, a smaller number of rainy days, and a smaller depth of rainfall than the average; while the wind was slightly above the average as to pressure on the square foot, and had a more than usually great preponderance of westerly direction.

: **TABLE XLII.**—Showing the connection between certain Atmospheric Phenomena, especially Temperature, and the Deaths from certain Diseases and Classes of Disease, in Eight of the Principal Towns of Scotland, during each Month of the Year 1887.

A 10x10 grid of 100 small, square, grayscale images. Each image is a different abstract pattern or texture, ranging from solid colors to complex, noisy, or geometric designs. The patterns are diverse and appear to be generated or selected from a large dataset.

USES of DEATH in SCOTLAND, at different Periods of Life, in 1887.—FEMALES. (Continued.)

Figure 1. A schematic diagram of the experimental setup. The subject is seated in a chair, viewing a screen displaying a target (T) and a starting point (S). The screen is divided into two regions: a left region (L) and a right region (R). The subject's hand is positioned at the starting point (S) and moves towards the target (T) in the right region (R). The distance between S and T is labeled as 'D'. The screen is also divided into two regions: a left region (L) and a right region (R). The subject's hand is positioned at the starting point (S) and moves towards the target (T) in the right region (R). The distance between S and T is labeled as 'D'.

Figure 1. Schematic diagram of the experimental setup. The subject is seated in a chair and views the target through a video camera. The target is a light source that is controlled by a computer. The subject's hand is positioned on a horizontal surface. The distance between the hand and the target is 10 cm. The subject is instructed to move the hand towards the target. The video camera records the hand's position and the target's position. The computer calculates the distance between the hand and the target and provides feedback to the subject. The subject is instructed to move the hand towards the target until the distance is 10 cm. The video camera records the hand's position and the target's position. The computer calculates the distance between the hand and the target and provides feedback to the subject. The subject is instructed to move the hand towards the target until the distance is 10 cm.

Ardoch, .	328	Bathgate, .	662	Preston, .	728	Cleish, .	460	Crosshill, .	584

* The actual number of Districts is 1048—many Parishes and Burghs having been divided into two or more Districts for the purpose of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 5 and 14 Districts respectively. In forming the alphabetical arrangement the principle adopted has been to place compound names in the order in which they are pronounced.

Southend, .	532	Stralachlan,	534	Tenandry, .	394	Twynholm,	883	Westerkirk,	854
